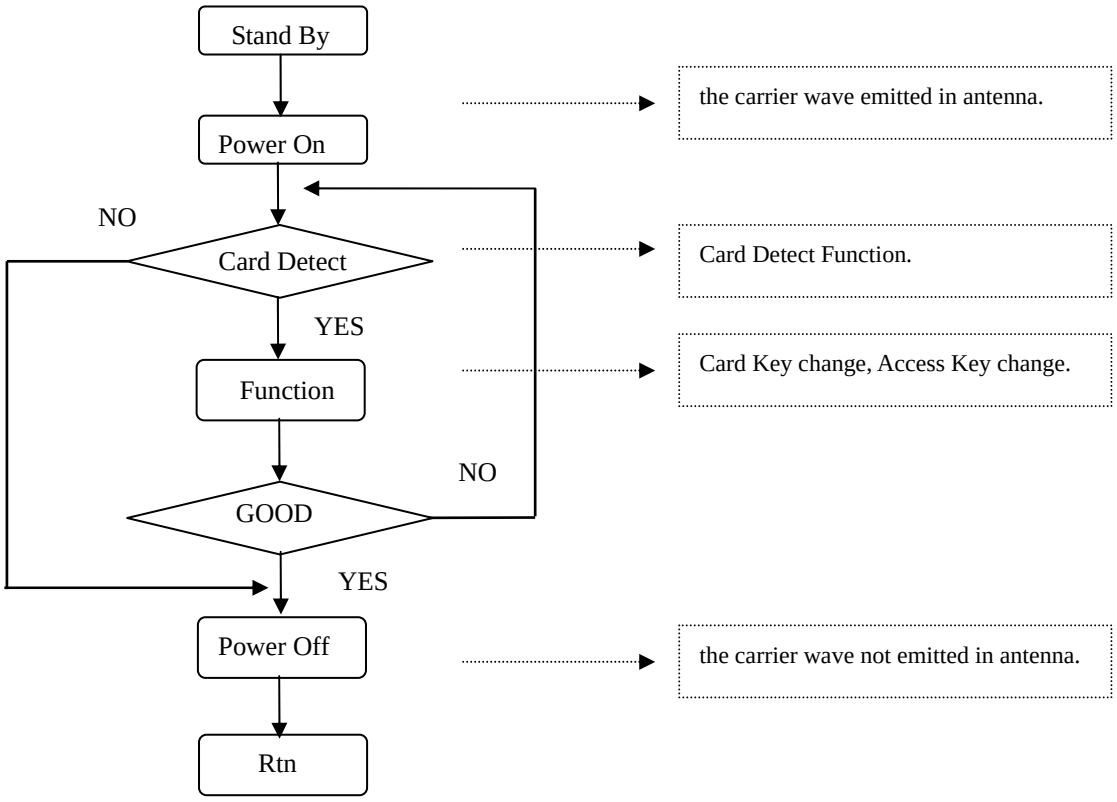
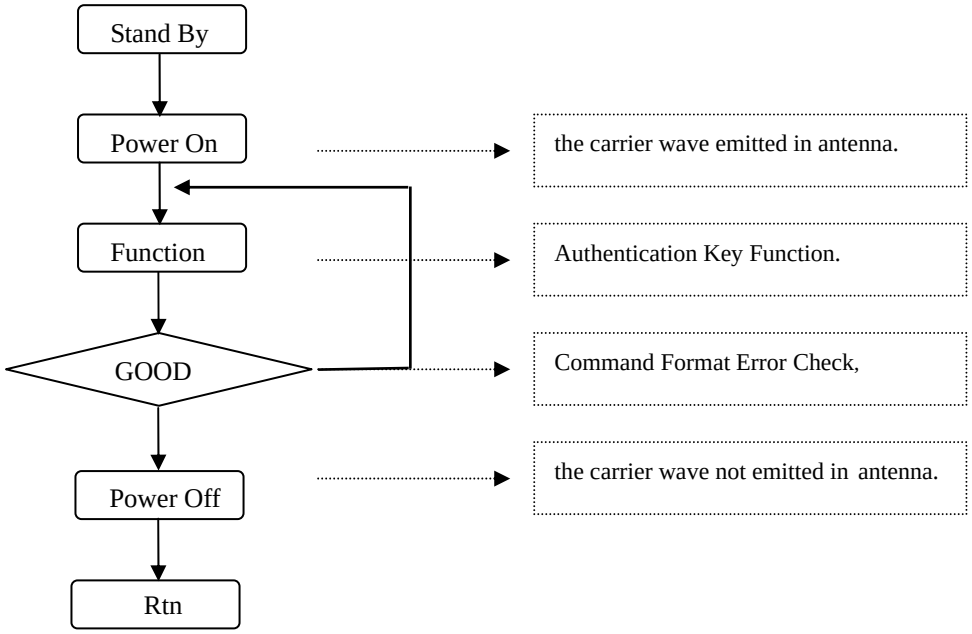
EXECUTION PROCEDURES

This is a flowchart that describes how to operate the read, write, increment and decrement command after detecting the card. However, it is possible to read, write, increase and decrease without detecting a card.

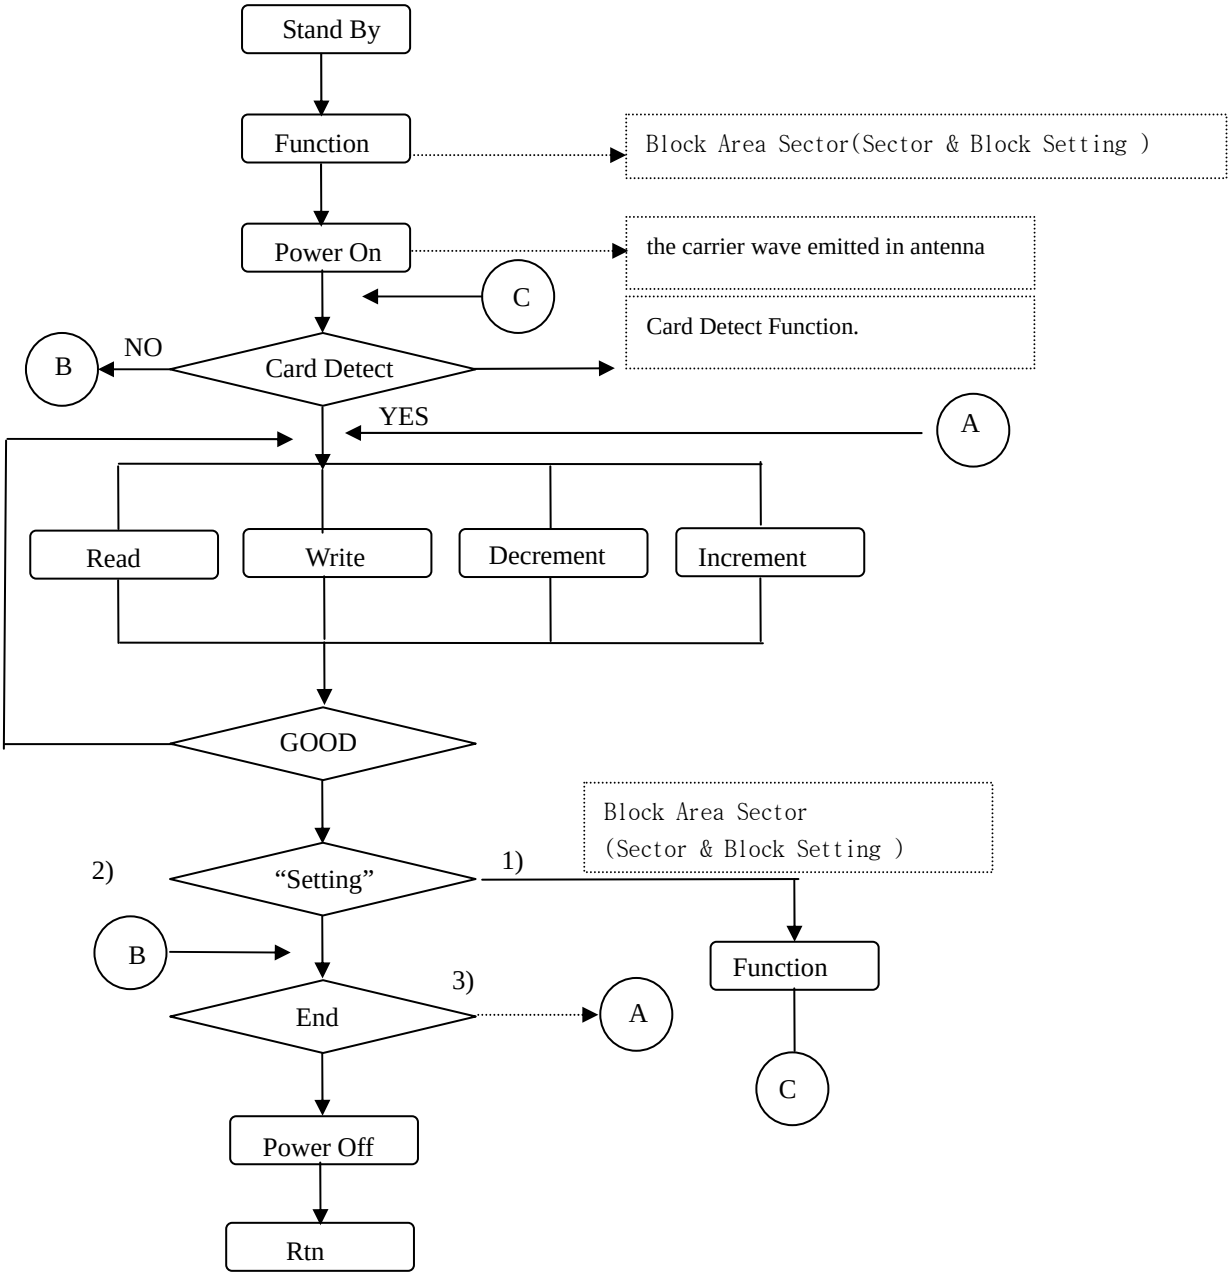
1. Card Key change, Access Key change Function.



2. Authentication Key Function.



3. Read/Write, Increment/Decrement, Balance Write/ Balance Read



1 : "Setting" is for new Sector or Block, not previous Sector or Block

2 : Confirm all the process for present card is completed.

3 : the carrier wave not emitted in antenna
